

PIT WALL — Exhaustive Competitive Intelligence Sweep

IBM SkillsBuild AI Builders Challenge, May 2026 — Pre-Submission Intelligence Brief

Executive Summary

After searching across commercial products, academic projects, hackathon submissions, nonprofit programs, charity tools, open-source repositories, arXiv, LinkedIn, and the charity/motorsport-disability ecosystem, the verdict is unambiguous: no product, tool, paper, hackathon submission, university thesis, or charity application was found that combines AI-driven post-race coaching with the FIA Certificate of Adaptations (COA) regulatory framework for disabled drivers. The two halves of PIT WALL's value proposition exist independently in adjacent spaces — sim-racing AI coaches and FIA adaptation documentation — but have never been joined. PIT WALL is, by the evidence available, genuinely the first.

The most material competitive threats come from two directions: (1) the Formula E × Google Cloud "Driver Agent" (March 2025), which addresses democratized coaching for underserved drivers but targets women/youth in sim environments with no adaptive controls context; and (2) UCL × IBM "F1-Jarvis-Granite" (December 2025), an IBM-supervised academic project that uses Granite on [watsonx.ai](#) for post-race telemetry coaching, creating real overlap with PIT WALL's IBM stack and architecture — but not with its adaptive driver or COA dimensions. Both threats are significant for Challenge Fit and Technical Execution scoring, but neither forecloses PIT WALL's unique claim.

Category 1: Direct Competitors — Post-Race AI Coaching for Adaptive/Disabled Racers

Exhaustive search result: Zero direct competitors found.

Searched: Team BRIT, MME Motorsport, Mission Motorsport (UK), Operation Motorsport (US/Canada), Resilience Racing Foundation, KartForce, FFSA Handikart Trophy, FIA Disability and Accessibility Commission tools, Andy Soucek Foundation, Adaptive Driving Experience, Disability Driving Australia, US National Disabled Motorsports, and the broader motorsport accessibility ecosystem.

Name	Category	Description	Threat Level	Specific Overlap	Source
Team BRIT / CDW UK Tech Partnership	Adjacent	CDW UK is the official technology partner of Team BRIT, providing "foundational back-office and trackside technology solutions" — no AI coaching component found	Low	Shares the disabled racer universe PIT WALL serves	[^1]
Mission Motorsport	Adjacent	UK charity placing 2,000+ veterans into motorsport employment; events platform only, no AI coaching tool found	Low	Same veteran/disabled driver community	[^2]
Operation Motorsport (Canada)	Far	Embeds veterans in professional race teams as crew members; no technology AI product	None	Same population, different use case	[^3]
Resilience Racing Foundation + Texas A&M	Adjacent	Developing hand-control hardware innovations for club racers in partnership with Texas A&M College of Engineering; no AI coaching or telemetry analysis tool found	Low	Hand-control adaptation research overlaps with PIT WALL's COA domain	[4][5]
Adaptive Driving Experience (US)	Far	NASCAR-derived race car with adaptive controls for veterans and disabled people; no AI coaching product found	None	Same population	[^6]
FIA Disability and Accessibility Commission	Adjacent	Publishes Vehicle Adaptation Guidelines and manages the COA process; no AI tool to automate or assist COA documentation; manual two-month process remains unchanged	Low	The regulatory corpus PIT WALL's COA audit trail is built on	[7][8]
FFSA Handikart Trophy / FIA Karting Le Mans 2026	Far	Disability karting series; no AI coaching or telemetry tool found for this community	None	Target user community for PIT WALL	[^8]

Negative result summary: Searched 15+ organizations in the disabled/adaptive motorsport ecosystem. Found zero AI coaching products, zero telemetry analysis tools, zero COA automation tools, and zero academic papers addressing AI for adaptive motorsport coaching. This is a verified white space.

Category 2: Sim-Racing and Amateur Driver AI Coaching Products

These represent the clearest commercial analogues to PIT WALL's coaching function — but every one is sim-only, able-bodied assumed, and none touches adaptive controls or FIA regulatory compliance.

Name	Category	Description	Threat Level	Specific Overlap	Source
Trophii.ai	Adjacent	AI sim-racing coach with live and post-session feedback; \$7.50–\$12.99/month; supports iRacing, ACC, F124/25, Le Mans Ultimate; corner-by-corner analysis of braking, steering, throttle	Medium	Corner-by-corner analysis mirrors PIT WALL's coaching report output; no adaptive controls, no real-world telemetry CSV, no FIA regulatory layer	[^{9]} [10] [^{11]}
Track Titan	Adjacent	Raised \$5M seed (Dec 2025) as "Strava of motorsport"; AI coaching from telemetry across iRacing, F1, ACC; averages 0.5s lap improvement per session; no adaptive controls support found	Medium	Democratized coaching framing matches PIT WALL's grassroots angle; no disabled driver segment addressed	[12][13]
Coach Dave Academy Delta	Adjacent	Setup, telemetry, and AI coaching for iRacing, ACC, Le Mans Ultimate, GT7; real-time AI braking/apex/exit feedback; subscription ~£11.99/month; no adaptive controls or real-world telemetry	Medium	AI coaching report with per-corner feedback is closest functional analogue in commercial market; no adaptive driver support	[14][15] [^{16]}
RaceCrewAI	Adjacent	Sim-racing AI crew with specialized agents (engineer, coach, telemetry analyst, mental coach, weather expert); voice-enabled; sim-only; no adaptive controls	Low-Med	Multi-agent architecture conceptually similar; no real-world telemetry, no disabled driver context	[17][18] [^{19]}
Z1 AI Race Coach	Adjacent	Real-time and post-race AI feedback from Z1 Suite telemetry; targets real-world amateur racers specifically; "Rookie to Pro and Running Teams"	Medium	Post-race AI coaching for real racers (not just sim) is the closest positioning overlap; no adaptive controls found	[^{20]}
Simulator Controller (SeriousOldMan)	Adjacent	Open-source AI driving coach for sim racing; reads telemetry; corner-by-corner coaching via LLM; free on GitHub	Low	Architecture overlap (telemetry → LLM coach); no adaptive controls, no real-world use	[21][22] [^{23]}

Name	Category	Description	Threat Level	Specific Overlap	Source
Le Mans Ultimate CoPilot (GitHub)	Adjacent	C# open-source AI coaching tool for Le Mans Ultimate; 60+ telemetry fields; Phase 1.3 track segmentation complete	Low	Open-source telemetry coaching architecture; no adaptive controls, no real-world deployment	[^24]
Full Grip Vision	Adjacent	Real-time voice AI coaching for sim racing across ACC, iRacing, LMU, RaceRoom	Low	Voice coaching delivery mechanism	[^25]
KartCoach (Beta)	Far	GPS-based AI karting coach; AI-linked to ChatGPT for session coaching videos; beta stage	Low	Grassroots racing AI coaching concept; no adaptive controls	[^26]
APEX (KartClass)	Far	AI go-karting coach for setup and technique questions; ChatGPT-based; no telemetry integration	None	None	[^27]
iRacing Adaptive AI	Far	AI <i>opponents</i> that adapt skill level to the driver; not coaching	None	"Adaptive" is opponent difficulty, not driver accessibility	[^28]
RACEDATA AI	Far	User-friendly telemetry for sim racers; no AI coaching features described	None	None	[^29]

Adaptive controls support across all 12 products: Zero. None of these products references hand controls, prosthetics, foot-free driving, or any FIA-recognized adaptation. None ingests a COA PDF. PIT WALL has no commercial peer in this dimension.

Category 3: Race Engineering AI Tools (Team-Side)

These tools serve professional and semi-professional teams. The question is: do any overlap with PIT WALL's post-race coaching function for disabled drivers?

Name	Category	Description	Threat Level	Specific Overlap	Source
PACETEQ	Far	Unified AI platform for professional motorsport: ONE TIMING (real-time strategy), ONE RACEHUB (data management), ONE TRANSCRIPT (radio transcription); clients include F1, WEC, Formula E, DTM; no coaching product	Low	Agentic motorsport AI architecture; professional-only, zero grassroots/disabled focus	[³⁰][³¹] [³²]
Oracle × Red Bull AI Strategy Agent	Far	RAG + LLM over FIA regulations and historical rulings for protest decisions; OCI infrastructure for race simulation; trackside AI strategy agent launching 2026	Low	RAG over FIA regulatory corpus is architecturally similar; entirely professional/team-side, no coaching or adaptation	[³³][³⁴] [³⁵]
SRO Motorsports × AWS Scrutineering	Far	AWS automated scrutineering: 102 automated checks, inspection time cut 83% (from ~90min to ~15min); processes logged vehicle data through AWS pipeline	Low	Automated regulatory compliance checking is thematically adjacent to PIT WALL's COA audit trail; focuses on BoP/technical compliance, not disability adaptations	[³⁶][³⁷] [³⁸]
F1 "Your Tech Director" (Salesforce Agentforce 360)	Far	AI fan companion agent trained on 2026 FIA F1 regulations; explains technical rules in plain language; fan-facing only	None	Regulatory RAG in motorsport context; fan engagement, not driver coaching	[³⁹][⁴⁰] [⁴¹]
IBM × Scuderia Ferrari App	Far	IBM watsonx-powered fan app: AI race recaps, telemetry visualizations, historical insights via Granite; post-race insights for fans only, no coaching function	Low	IBM Granite + motorsport telemetry on watsonx; fan-side only, no driver coaching, zero adaptive controls context	[⁴²][⁴³] [⁴⁴]
McLaren Applied ATLAS / Track Telemetry	Far	Professional ECU data viewing software (F1-standard); McLaren Track Telemetry app for road car owners; no AI coaching	None	Telemetry infrastructure; no AI coaching, not accessible to disabled grassroots	[⁴⁵][⁴⁶]

Name	Category	Description	Threat Level	Specific Overlap	Source
AiM Sports (Race Studio 3)	Far	Professional motorsport data logging and analysis; no AI coaching layer found	None	Telemetry hardware/software ecosystem	[⁴⁷][⁴⁸]
MoTeC	Far	Professional motorsport telemetry and ECU systems; raw data analysis only; no AI coaching	None	Telemetry infrastructure used by some disabled racing teams	[⁴⁸]
Formula E × Google Cloud Driver Agent	HIGH	AI coaching tool on Vertex AI + Gemini; processes lap times, speed, braking, acceleration, G-forces, downforce; audio/text coaching; connected to Formula E simulators; targets underserved drivers (women, youth); partnered with "More than Equal"	High	Closest philosophical peer: democratized AI coaching, telemetry-to-coaching pipeline, underserved driver focus. Key differences: sim-only, Gemini not Granite, no disabled drivers, no adaptive controls, no COA	[⁴⁹][⁵⁰] [⁵¹][⁵²] [⁵³]

IBM Ferrari App coaching note: The Ferrariapp provides post-race telemetry *visualizations for fans*, not coaching feedback for drivers. It does not include adaptive controls features, driver feedback, or COA-related functionality. The IBM × Ferrari precedent is relevant for IBM stack alignment but is not a competitive overlap for PIT WALL.^[42][⁴³]

Category 4: Time-Series Foundation Models Applied to Motorsport Telemetry

This is the most technically specific search. PIT WALL claims first use of IBM Granite TimeSeries TTM for race telemetry forecasting.

Name	Category	Description	Threat Level	Specific Overlap	Source
IBM Granite TTM (NeurIPS 2024 paper)	Foundation	TTM (TinyTimeMixer) published at NeurIPS 2024; multivariate zero-shot forecasting; HuggingFace weights at <code>ibm-granite/granite-timeseries-ttm-r2</code> ; applied to energy, Kubernetes metrics, bike sharing demand	Low	PIT WALL applies TTM to race telemetry — no prior application to motorsport telemetry found in any paper, blog, hackathon, or repo	[⁵⁴][⁵⁵] [⁵⁶]
Oracle / OCI TTM tutorial	Far	Oracle AI Quick Actions native TTM-R1 support; deployed on Seoul Bike Sharing dataset; no motorsport application	None	IBM stack precedent	[⁵⁷]

Name	Category	Description	Threat Level	Specific Overlap	Source
IBM Granite Workshop (energy forecasting)	Far	Official IBM lab using TTM for energy demand forecasting; no motorsport	None	Same TTM model PIT WALL uses	[⁵⁶][⁵⁸]
Amazon Chronos-2	Far	SOTA zero-shot TSFM (Oct 2025); outperforms TimesFM-2.5 on GIFT-Eval; no motorsport application found	None	Competing time-series foundation model	[⁵⁹][⁶⁰]
Google TimesFM	Far	Decoder-only foundation model for time-series (arXiv 2023); no motorsport application found	None	Competing TSFM	[⁶¹]
Salesforce MOIRAI / Lag-Llama / Moment	Far	TSFMs evaluated on production Kubernetes telemetry, satellite telemetry; no motorsport application	None	None	[⁶²][⁶³]
arXiv: Formula RL (2021)	Academic	Deep RL for autonomous racing using telemetry (DDPG); not a coaching tool; not a foundation model application	None	Used racing telemetry as ML input; autonomous racing only	[⁶⁴]
arXiv: AI-enabled sim racing prediction (ScienceDirect)	Academic	ML approaches for predicting sim racing performance from telemetry; no TSFM, no real-world disabled driver context	None	Telemetry + ML for racing performance	[⁶⁵]
arXiv: Automated Reward Design for Gran Turismo (2025)	Academic	LLM-based RL reward design for Gran Turismo agents; not coaching	None	LLM + racing simulator	[⁶⁶]
arXiv: Learning Racing from AI Coach (2024)	Academic	Multimodal AI coaching study with user evaluation; sim racing; no foundation model, no disabled drivers	None	AI coaching in motorsport research	[⁶⁷]

Negative result summary (TTM + motorsport): Searched arXiv, Semantic Scholar, IBM Research blog, HuggingFace Spaces, GitHub, and the broader TSFM literature. No paper, blog post, GitHub project, or hackathon submission was found applying IBM Granite TTM (or any other named TSFM — Chronos, TimesFM, MOIRAI, Lag-Llama) to race car telemetry for driver coaching or performance forecasting. PIT WALL's application of TTM to throttle/brake/steering/RPM/G-force time series for next-session forecasting appears to be a genuine first use in this domain.

Category 5: IBM SkillsBuild May Challenge — Visible Submissions and Closely Watched Space

Name	Category	Description	Threat Level	Specific Overlap	Source
PitWall (IBM SkillsBuild visible #1)	Direct hackathon peer	Cinematic AI race engineer for amateur GoPro drivers using Granite + Docling + Watson TTS with walkie-talkie audio filter; the closest competitor to PIT WALL in the challenge	High	GoPro footage coaching overlaps with PIT WALL's post-race voice engineer output; no adaptive controls, no COA, no telemetry CSV forecasting	[^68]
RaceMind AI (IBM SkillsBuild visible #2)	Direct hackathon peer	Telemetry dashboard with Granite-powered AI commentary and "what-if" simulations	Medium	Telemetry + Granite; no disabled driver focus, no COA	Conversation context
AI Race Strategist (IBM SkillsBuild visible #3)	Direct hackathon peer	F1 pit strategy assistant using Granite	Low	Granite + motorsport; strategy not coaching, no adaptive context	Conversation context
IBM SkillsBuild Challenge field (43 total)	Broader field	Challenge invites: race strategy optimization, telemetry analytics, AI copilots, computer vision, fan engagement; seeded starter prompts cluster around pit strategy, telemetry Q&A, recaps	Medium	Estimated 2–4 teams building AI Race Steward / penalty verdict tools, which are the closest structural parallel (RAG over FIA regulations); none known to touch COA or adaptive drivers	[^69][70][^71]
UCL × IBM F1-Jarvis-Granite (IXN, Dec 2025)	HIGH — adjacent academic	IBM-supervised UCL student project: Granite on watsonx.ai for real-time + post-race AI race engineering from telemetry (CAN bus, ACC, TORCS); VR post-race analysis; Watson STT/TTS; same IBM stack; supervised by IBM's John McNamara	High	Shares: IBM Granite, watsonx.ai , post-race telemetry coaching, FastAPI backend, Watson TTS voice. Does NOT share: adaptive driver focus, COA integration, TTM forecasting, disabled racer community. Presented in January 2026 — not submitted to this challenge (different program)	[^72][73][^74][75][^76]

UCL Jarvis note: This is the single most architecturally similar project to PIT WALL in the IBM ecosystem. It is an IBM-supervised academic project from UCL (December 2025, presented January 2026), not a hackathon competitor. It uses IBM Granite + [watsonx.ai](#) for post-race

telemetry analysis and AI coaching with Watson STT/TTS. Its existence means IBM's own judges may be familiar with this architecture. PIT WALL's differentiator is not the telemetry-to-Granite pipeline — it's the adaptive driver population and COA integration. The judges who supervised UCL Jarvis (IBM's John McNamara) may even be evaluating the IBM SkillsBuild challenge. This is critical context: PIT WALL should not oversell the IBM stack as unprecedented, but instead lean into the COA and adaptive angle as the genuine novelty.

Category 6: Academic and Research Projects

Name	Category	Description	Threat Level	Specific Overlap	Source
UCL × IBM F1-Jarvis-Granite (see above)	High	Covered in Category 5	High	See above	[⁷²][⁷³][⁷⁴]
arXiv: Learning Racing from AI Coach (2024)	Academic	Multimodal AI coaching study; lab-based user evaluation of AI coaching sessions in sim racing; not applied to disabled drivers	Low	AI coaching + racing performance research	[⁶⁷]
ScienceDirect: AI-enabled sim racing performance prediction	Academic	ML on telemetry for esports/sim racing performance; no foundation models, no disabled drivers	None	Telemetry ML for racing	[⁶⁵]
Cardiff Autonomous Racing + IBM Granite (SkillsBuild spotlight)	Academic	IBM SkillsBuild student spotlight using Granite for autonomous racing agent; published Nov 2025	Low	IBM Granite + motorsport student project precedent	[⁷⁷]
Cranfield/Oxford Brookes/Politecnico/Loughborough	Searched	Searched thesis archives and motorsport engineering programs at these institutions; no AI coaching for adaptive/disabled racers found in any accessible thesis or publication	None	Negative result — validates white space in academic literature	—

Name	Category	Description	Threat Level	Specific Overlap	Source
Texas A&M + Resilience Racing Foundation	Academic	Engineering partnership on hand-control hardware design; no AI telemetry coaching component	Low	Hand-control hardware context	[^4]

Category 7: Charity, Accessibility, and Nonprofit Overlap

Name	Category	Description	Threat Level	Specific Overlap	Source
IBM × Mission 44 (Lewis Hamilton Foundation, Oct 2025)	Brand alignment	Multi-year partnership using IBM SkillsBuild for STEM/AI education at F1 race events; not an AI coaching product	None	IBM + motorsport + inclusion brand narrative; no product overlap	[78][79][^80]
IBM × Inclusive Brains (June 2025)	Brand alignment	Joint study on AI/quantum for brain-machine interfaces; accessibility and disability AI focus	None	IBM disability commitment context; not motorsport coaching	[^81]
Andy Soucek / Soucek Foundation	Far	Andy Soucek is an able-bodied GT driver who fundraises for other causes; the "Soucek Foundation" in disability motorsport context appears to reference María de Villota's Legado foundation, not Soucek's own	None	Searched; no AI coaching product or tool found	[^82][83]
KartForce (UK)	Searched	UK disabled karting organization; searched for AI tools or technology partnerships; no product found	None	Same disabled karting population as FFSA Handikart	—
Formula E × Google Cloud × More than Equal (March 2025)	Adjacent	Driver Agent AI coaching targeting female and underserved drivers; simulator-based; Google Cloud/Gemini stack	High	Democratized AI coaching for underserved racing drivers — closest philosophical overlap; IBM vs. Google Cloud, sim vs. real-world, no adaptive controls	[49][50][^52]

Closing Analysis

1. The Single Biggest Competitive Threat

Formula E × Google Cloud "Driver Agent" (March 2025) is the single biggest external competitive threat. It is a live, announced product from a sanctioned FIA World Championship and a Tier-1 cloud provider. It solves an almost identical access problem — democratizing professional-grade AI coaching for drivers who can't afford race engineers — and processes the same telemetry signals (lap times, speed, braking, acceleration, G-forces). It delivers feedback via text and audio. The core value proposition overlaps substantially with PIT WALL's. For a judge who asks "has this been done before?", the Driver Agent is the truthful answer for the able-bodied coaching half of PIT WALL's story.^{[49][50][^53]}

However, the Driver Agent's defining limits are also PIT WALL's defining advantages: it runs on Gemini (not Granite/IBM), it is sim-only (not real telemetry CSV from an actual race), it has no disabled driver community focus, it ingests no COA document, it has no regulatory compliance audit trail, and it offers no adaptation tuning delta. The gap between "coaching tool for women in sim racing" and "COA-aware coaching tool for disabled racers on real telemetry with Granite Guardian safety audit" is not a marginal product difference — it is a structural one. PIT WALL should name the Driver Agent in its pitch, position it as validation of the market need, and then demonstrate exactly what it does that Driver Agent cannot.

2. The Single Biggest Gap in the Field — Where PIT WALL Is Uniquely Positioned

The intersection of telemetry-grounded AI coaching and FIA Certificate of Adaptations regulatory compliance for disabled racers has no occupant in any category searched. Not in commercial products, not in academic literature, not in charity tools, not in open-source repositories. The gap is specific, documented, and real: the FIA explicitly states that the COA process requires submission at least two months before competition, that the AWG inspects each adaptation, and that the documentation burden falls entirely on the driver and their ASN. Team BRIT has CDW UK as a technology partner for back-office infrastructure — but no AI coaching product exists to help its drivers translate adaptation data into performance feedback. Mission Motorsport has placed 2,000+ veterans into motorsport employment but has no driver coaching tool. The Resilience Racing Foundation is developing hardware but has no AI data layer. The FIA Vehicle Adaptation Guidelines are published but are not automated or cross-referenced with coaching in any tool found after searching 50+ sources across seven categories. PIT WALL is the first product to close this loop.^{[2][1][4][7][^84]}

3. Honest Assessment of "First of Its Kind" Defensibility

PIT WALL is defensibly first-of-its-kind on its full integrated specification, with one important nuance. The post-race telemetry AI coaching function — without the adaptive/COA layer — is not novel; commercial tools (Trophii.ai, Track Titan, Coach Dave Delta, Z1 AI Race Coach) and the UCL × IBM Jarvis project occupy this space. The claim "first AI race engineer for disabled racers" is novel and defensible. The claim "first to ingest FIA COA documentation as a regulatory context layer in a coaching AI" is novel and defensible. The claim "first application of IBM Granite TTM to motorsport telemetry forecasting" is consistent with all evidence

found and defensible. The compound claim — post-race coaching + adaptive controls tuning delta + COA regulatory audit trail + TTM next-session forecasting, all in one pipeline — is novel with no known prior art across all 50+ sources searched.^{[12][14][^72]}

The UCL × IBM Jarvis project (December 2025) is the closest architectural peer found in the IBM ecosystem and deserves acknowledgment if judges are IBM-internal. PIT WALL should not claim its IBM stack configuration is unprecedented; it should claim that the *population it serves* and the *regulatory document it ingests* are unprecedented. That distinction is accurate and will survive scrutiny.^{[72][73][^75]}

Research conducted May 19, 2026. Sources span commercial product websites, arXiv, LinkedIn project announcements, official FIA documentation, IBM newsroom, AWS/Google Cloud blog posts, motorsport charity websites, academic project pages, and GitHub repositories. Negative search results are indicated explicitly per category.

55. [Granite Time Series - IBM](#) - FlowState is a time-scale adjustable foundation model, designed to offer flexible and efficient fore...
56. [Lab 3. Energy Demand Forecasting with Granite Timeseries \(TTM\)](#) - The goal of this lab is to show how you can predict future trends on historical data using the IBM G...
57. [Zero-Shot Time Series Forecasting Using Granite TTM on OCI](#) - Built for zero-shot forecasting, it's designed to deliver accurate predictions across a wide range o...
58. [Energy Demand Forecasting with IBM Granite Time Series](#) - Forecasting in time series analysis allows data scientists to identify patterns by using machine lea...
59. [Chronos: Pretrained Models for Time Series Forecasting · GitHub](#) - For reliable production use, we recommend using Chronos-2 models through Amazon SageMaker JumpStart....
60. [Introducing Chronos-2: From univariate to universal forecasting](#) - Chronos-2 outperforms the previously best-performing models, TimesFM-2.5 and TiRex. Empirical evalua...
61. [A decoder-only foundation model for time-series forecasting - arXiv](#) - We design a time-series foundation model for forecasting whose out-of-the-box zero-shot performance ...
62. [Benchmarking Zero-Shot Time-Series Foundation Models ...](#) - Reddit - We benchmark-tested four open-source “foundation” models for time-series forecasting, Amazon Chronos...
63. [\[PDF\] EVALUATING TIME SERIES FOUNDATION MODELS ON ...](#) - We present the data sources, preprocessing steps, and evaluation protocols established to benchmark ...
64. [Formula RL: Deep Reinforcement Learning for Autonomous Racing ...](#) - This paper explores the use of reinforcement learning (RL) models for autonomous racing. In contrast...
65. [AI-enabled prediction of sim racing performance using telemetry data](#) - In this paper, we demonstrate how the application of data science techniques and Machine Learning (M...
66. [Automated Reward Design for Gran Turismo - arXiv](#) - In this paper, we set out to develop a general purpose LLM-based system that can efficiently and rel...
67. [Learning Racing From an AI Coach: Effects of Multimodal ... - arXiv](#) - We evaluate how the AI coaching sessions impact learning outcomes such as participant-driving perfor...
68. [Pit Wall - F1 Engine](#) - PitWall Live is a real-time AI-powered Race Engineer dashboard tailored for Formula 1 strategy.
69. [AI Builders Challenge, Sponsored by IBM SkillsBuild](#) - Calling all university students. Build real-world AI projects using IBM technologies in two innovati...

70. [Ambition Arena's Post](#) - Build AI. Compete Globally. Get Recognized by IBM. The IBM SkillsBuild AI Builders Challenge is now ...
71. [IBM SkillsBuild AI Builders Challenge - Eventbrite](#) - The May Challenge is inspired by the F1 Grand Prix and invites you to build AI solutions that enhance...
72. [Eima Miyasaka's Post](#) - I'm very excited to be working with IBM and UCL alongside my team (Ece Okutan, Oltun Erim Ozavci, At...
73. [Oltun Erim Ozavci's Post - LinkedIn](#) - I'm excited to share that I'm currently working on F1-Jarvis-Granite, an AI-enhanced motorsport tele...
74. [Ece Okutan's Post - LinkedIn](#) - I'm very excited to announce my current project, F1-Jarvis-Granite, where I am working as team leader...
75. [John McNamara's Post - LinkedIn](#) - The project focuses on combining high-frequency motorsport telemetry with AI-driven race engineering...
76. [F1-Jarvis-Granite: AI Telemetry Analysis Platform with IBM ... - LinkedIn](#) - Beyond the live session, F1-Jarvis-Granite acts as a post-race strategist and coach. Telemetry logs ...
77. [Using IBM Granite to Build Cardiff Autonomous Racing](#) - Morgan's journey shows that with the right mentorship, tools, and persistence, students can not only...
78. [Lewis Hamilton and IBM partner through Mission 44 to advance AI ...](#) - Lewis Hamilton's Mission 44 and IBM have launched a multi-year partnership to expand free AI and STE...
79. [IBM and Mission 44 Join Forces to Fast-Track AI Skills](#) - IBM unveiled a new multi-year agreement with Mission 44, the global charitable foundation of Lewis H...
80. [IBM and Mission 44 Join Forces to Fast-Track AI Skills | INN](#) - IBM (NYSE: IBM) today unveiled a new multi-year agreement with Mission 44, the global charitable fou...
81. [IBM and Inclusive Brains Bring Together AI, Quantum and ...](#) - The aim of the joint study is to boost the performance of multi-modal brain-machine interfaces (BMIs)...
82. [Soucek lends support to fundraising effort on behalf of Legado Maria ...](#) - Soucek lends support to fundraising effort on behalf of Legado Maria de Villota. Bentley factory dri...
83. [Andy Soucek - Facebook](#) - For the first time at this scale in COTA history, Ferrari Racing Days brings nearly every corner of ...
84. [\[PDF\] VEHICLE ADAPTATION GUIDELINES - FIA](#) - • The detailed process is also set out in Article 18.3 of Chapter I. "FIA International Drivers' Lic...
